Knapp serves an average of 300 inpatients per year. Patients ages 13 and above are admitted to the comprehensive and specialty brain injury programs; patients ages 18 and above are admitted to the stroke specialty program.

The overall length of stay for all inpatients is an average of 15 days, for Stroke the average is 17 days and for Brain Injury the average length of stay is 14 days.

In 2019, 68% of inpatients were discharged to their home community. Some patients come into the hospital without homes or families to assist them. Patients may also be discharged to a homeless shelter or a sub-acute rehabilitation facility.

Based upon patient survey results, 97% of patients recommend the care they received at Knapp Rehabilitation Center to a friend (2019).
Miland E. Knapp Rehabilitation Center

Inpatient Statistics & Outcomes 2019

During the inpatient rehabilitation program at Knapp, patients receive a minimum of 3 hours of therapy per day or a total of 15 hours each week. The therapies include Physical Therapy, Occupational Therapy, and Speech Language Pathology. Other services provided include Clinical Psychology, Neuropsychology, Therapeutic Recreation, and Social Work. Rehabilitation nursing is provided on a 24 hour, 7 day per week basis. Each person's rehabilitation program is outlined and directed by a rehabilitation physician. Other physician specialists are available to manage the care and treatment as needed. Families are welcomed and included in the program. The rehab team's goals center on transferring the care and independence training from us to the person served and their family.

![Average Length of Stay](chart)

In 2019, Knapp Rehab discharged 284 patients, 68% of them were able to go home from the program. Most of those discharged home continued their therapy as outpatients on a less than daily basis. The national average during the same year was 79% of the patients went home. Other individuals who completed the Knapp inpatient rehab program needed more therapy in a long term care facility where the therapy sessions could be provided on a daily basis before they were able to go home. Together, discharges to home and discharges to a second rehab setting represented 90% of the patients that were served at Knapp Rehabilitation.
