

COMFORT POSITIONS FOR NEEDLE PROCEDURES

BEAR HUG OR FRONT TO FRONT

This hug from a caregiver can provide comfort and allow for distraction.

FRONT TO BACK

This works well for bigger kids who want to see what is happening.

SIDE SITTING

This helps wiggly kids stay still while getting a hug.

CRADLE OR SWADDLE

This is good for our littlest patients. They can breast or bottle feed during the procedure.

TLC NEEDLE POLICY

Hennepin Healthcare staff are committed to helping families and kids manage the fear and pain of needles.
